Aerospace/Aviation Technology Maintenance AAS —Certification Information

Updated 8/6/2024

The Federal Aviation Administration (FAA) has certification requirements that are independent of the graduation requirements from the SLCC Aerospace/Aviation Technology Maintenance AAS program. It is highly recommended that students consult in advance with FAA webpages for information about the basic requirements to become a certified Aviation Mechanic. Applicants for certification are asked about US citizenship status, criminal conviction status, and applicants are required to report past certification suspensions or revocations.

Helpful FAA Webpages:

- Mechanic Certification and Records

- Frequently Asked Questions

- Form FAA 8610-2 Airman Certificate and/or Rating Application – Mechanic and Parachute Rigger.
